

PPT Energy Trading Co., Ltd. Quality Management System (QMS) and HSSE Company Policy

PPT Energy Trading Co., Ltd. (PPT ET) is shaping a future where our trading operations are synonymous with the highest environmental integrity and sustainability standards. We are on a transformative journey, evolving from a traditional oil trading company to a clean, corporate trading leader. Our direction is firmly toward the Energy Transition, New Renewable Energy (NRE) advancement, and the committed pursuit of Net Zero Emissions.

QMS Framework Aligned with Quantitative and Transformation Goals

Our Quality Management System (QMS) is designed to strengthen this vision. It is a foundation of our strategic pivot, ensuring that we uphold the most demanding standards of quality and environmental stewardship as we transition from oil trading. The QMS is a witness to our commitment to quality, safety, environmental care, and precise quantity management as we embrace New Renewable Energy markets.

Commitment to Certified Quality, Environmental, and Quantity Standards

At PPT ET, we raise the bar for trading by maintaining superior quality and strict compliance. We exclusively trade in biomass products processed by suppliers certified under the sustainable management system (ISCC, GGL, FSC, and other related systems), which confirms the sustainability, responsible sourcing, and accurate quantity tracking of materials traded under our brand.

Health, Safety, Security, and Environment (HSSE) Office Rules

In tandem with our QMS, our HSSE Office Rules are the operational backbone of our environmental and safety ethos. They are the practical implementation of our dedication to the welfare of our employees, partners, and the planet. As we transition towards a greener future, our HSSE policies will continue to evolve to reflect the latest in environmental safety and corporate responsibility.

Transport and Supply Chain Integrity with a Focus on Quantity

In our trading operations, we diligently oversee the transportation and handling of materials, emphasizing the importance of quantity accuracy. We ensure that our supply chain reflects our principled stance, with all biomass traded goods sourced from GGL-certified suppliers, ensuring traceability, quality, and precise quantity measures.

Sustainable Development, Compliance, and Quantity Assurance

Our QMS and HSSE policies, dynamic in nature, are created around our sustainable development aspirations, compliance with all relevant environmental regulations, and severe quantity controls. These documents are crucial for charting our path towards Net Zero Emissions and will be continually refined to stay up-to-date of the latest standards in clean energy and quantity assurance practices.

Commitment to Stakeholders

We are committed to showing our stakeholders that we conduct trading with the utmost integrity, including maintaining accurate quantity records. Our QMS and HSSE policies are more than internal guidelines; they are our initiative to our collaborators, business, and the international community that PPT ET stands for unmatched environmental excellence in trading biomass products.

As PPT ET advances, our QMS and HSSE policies will be the basis of our operations, ensuring that we meet the anticipated standards for leaders in the new era of energy trading. Our voyage towards a clean, sustainable future is marked by commitment, transparency, and persistent pursuit of excellence, with a deep focus on the quantity and quality of our biomass product offerings.
